Program Description :

Sustainable engineering refers to the integration of social, environmental, and economic considerations into the design of product, process, and energy systems. Additionally, sustainable engineering encourages the consideration of the complete product and process lifecycle during the design effort. The intent is to minimize environmental impacts across the entire lifecycle of a product or process while simultaneously maximizing the benefits to social and economic stakeholders. This environmental engineering degree builds on RIT's work in sustainability research and education, and offers students the flexibility to develop tracks in areas such as renewable energy systems, systems modeling and analysis, product design, and engineering policy and management.

Admission Requirement :

- Hold a baccalaureate degree (or equivalent) from an accredited university or college with 3.0 CGPA and higher.
